ALU-T-SLOT PROFILE SYSTEM

Unique Connections.
Special T-Slot contour.

@flex®

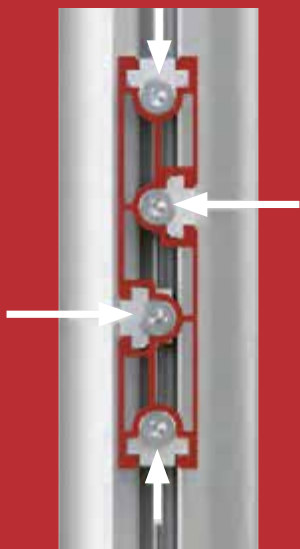

www.isel-automation.com/aflex

*Assembly in record time.
Flexibility in every step.
Simplicity that sets new standards.*

The *@flex*[®] profile system enables stable, flexible and efficient superstructures without the need for milling or drilling. The arrangement of differently aligned T-Slots in a line makes it possible to connect from several directions.

T-Slot contour

Due to the T-Slot cover and the special T-Slot contour a two-part core hole for M10 is created. A self-threading M10 bush can be screwed into this core hole. This achieves a solid connection and stability all around.
